-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Terminal Disclaimer

The terminal disclaimer filed on 12/20/04 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 09/936,916 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Specification

The amendment filed on 12/20/04 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: incorporation by reference to both the US and European patents noted in Paragraph 31.

Applicant is required to cancel the new matter in the reply to this Office Action.

It is also requested to the Applicant to amend paragraph 8 of the specification to reflect the changes to the amend to paragraph 6. In particular deleting the phrase " the above described."

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-17 and 25 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter

Art Unit: 1731

which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The newly added limitation now requires that radiation acting indirectly is more than 50% the total radiation power. The originally filed specification does not support the claimed radiation acting indirectly is more than 50% the total radiation power but does support claimed radiation acting indirectly is more than 50% of the total radiation impinging on the surfaces of the blanks (See Paragraph 31 of the file specification).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6-9 and 16-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 6-9 and 16-19 recite various forming steps that comprise vacuum lowering, but is unclear what is being lowered. Clarification is requested.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References A and N-O have been cited to show the state of the art.
